

E-Commerce Business Analysis Dashboard

Project Overview

This project focuses on analyzing e-commerce business performance using Power BI. The dashboard provides insights into sales, profit, customer behavior, product performance, and regional contribution to support data-driven business decisions.

Tools Used

- Power BI
 - Power Query
 - DAX
 - Excel
-

Key KPIs

- Total Sales
 - Total Profit
 - Profit Percentage
 - Total Customers
 - Total Orders
 - Product Contribution
 - Loss Analysis
-

Dashboard Features

- Sales performance overview
 - Category-wise profit analysis
 - Customer contribution analysis
 - Product-level performance tracking
 - Regional sales insights
 - Profit and loss visualization
 - Interactive filters and slicers
-

Key Business Insights

- Technology category generated the highest overall sales contribution.
 - Certain products showed high sales but low profitability, indicating margin optimization opportunities.
 - Customer contribution analysis identified top revenue-generating customers.
 - Regional performance analysis highlighted areas with strong and weak profitability.
 - Some product categories contributed significantly to losses despite strong sales volume.
-

Business Recommendations

- Focus marketing efforts on high-profit product categories.
 - Reduce losses by optimizing pricing and inventory for low-margin products.
 - Improve customer retention strategies for high-value customers.
 - Monitor underperforming regions and products for operational improvements.
 - Use profit-focused KPIs instead of only sales-focused tracking.
-

Skills Demonstrated

- Data Cleaning and Transformation
 - Data Visualization
 - Dashboard Design
 - Business Analysis
 - KPI Reporting
 - DAX Calculations
 - Analytical Thinking
-

Project Outcome

This dashboard helps businesses monitor performance, identify growth opportunities, optimize profitability, and make informed business decisions using interactive data visualization.
